<b>JavNat and Nat2EGL - Service Level (SL) Descriptions</b>	
<b>SL-1</b>	<p>FBDA will deliver to the customer:</p> <p>Generated Java or EGL source code files which, with minor editing and compilation, provide a complete functional equivalent of the original Natural application with virtually identical processing and user interface.</p> <p>Generated DDL for the associated target RDBMS. Java based Adabas data migration utilities for movement of Adabas data to the target RDBMS.</p> <p>A JavNat or Nat2EGL Process Guide including instructions for manual remediation of the generated code, unit testing, system testing, and data migration.</p> <p>A one week migration training course at the customer facilities.</p>
<b>SL-2</b>	<p>FBDA will deliver to the customer:</p> <p>All SL1 deliverables described above; plus</p> <p>Edited Java or EGL source code that has been check compiled and unit tested at FBDA facilities.</p>
<b>SL-3</b>	<p>FBDA will deliver to the customer:</p> <p>All SL1 and SL2 deliverables described above; plus</p> <p>Conversion of non-Natural components including JCL</p> <p>Customer site production installation, data migration, and system testing.</p>
<b>Notes:</b>	<p>Service Level 1 &amp; 2 are typically quoted as a fixed price after inventory and assessment of the customer source code and Adabas environment is complete.</p> <p>Service Level 3 is typically quoted Time &amp; Materials based on a detailed assessment of the customer's source code, Adabas environment, data quality, and production environment.</p> <p>For Service Level 1 there is a one time license fee for the data migration tools.</p> <p>Customers may easily undertake SL 2 or 3 activities using their own staff with training and support from FBDA.</p>
